

ABSTRACT

The present invention relates, in an automotive window glass having a ceramic color layer formed thereon, to the automotive window glass being
5 characterized in that a ceramic color layer is formed on an entire surface or part of the automotive window glass by using a ceramic color paste containing a green-color pigment in an amount of 30-80wt% relative to 100wt% of a total of a black-color pigment and the green-color pigment, and that, in an L*a*b* color system, a transmitted color of the glass has a value of a* of -10.0 to 0.0,
10 and a reflected color of the ceramic color layer, which is observed from a vehicle exterior side through the glass has $L^* \leq 30.0$, $-10.0 \leq a^* \leq 0$, and $-2 \leq b^* \leq 8$.
